

Table 71 Output from **SUBROUTINE STRUCT** in GENOPT for local buckling and effective stress in the shell skin and in the meridionally oriented isogrid stiffener for the optimized **"perfect" isogrid-stiffened** equivalent ellipsoidal shell with an **axisymmetric +mode 1** buckling modal imperfection with amplitude, Wimp = +0.0001 inch. Critical and near-critical stresses are in bold face. **Locations of shell segments are indicated in Fig. 2. These are BIGBOSOR4 predictions.**

=====

NOTE: The values listed under the headings, "PERTURBED" and "UNPERTURBED" are identical here because this list corresponds to the "fixed" design analysis type in MAINSETUP (**ITYPE = 2**). There are no perturbations of the decision variables in an **ITYPE = 2** run of OPTIMIZE. The values of bskin1 and bstif1 are the **minimum** values computed for all the segments in Region 1. The values of bskin2 and bstif2 are the **minimum** values computed for all the segments in Region 2. The values of sknm1 and stfm1 are the **maximum** values computed for all the segments in Region 1. The values of sknm2 and stfm2 are the **maximum** values computed for all the segments in Region 2. The values of bskin1, bstif1, sknm1, stfm1, bskin2, bstif2, sknm2, stfm2, and ENDUV are used in the computation of Margins 3, 5, 7, 9, 4, 6, 8, 10, and 11, respectively, listed in Table 70.
