

Table 63 Input file, **\*.OPT**, for the **"MAINSETUP"** processor for the case with four load sets involving (+ and -) **modes 1, 2, 3, and 4**. Compare with Table 37, for which there are two load sets, Loadsets 1 and 2.

#### NOTES:

1. The input line for IBEHAV is repeated NCASES times, where NCASES = the number of load sets. In this case there are four load sets, the first corresponding to shells with +mode 1 and +mode 2 axisymmetric imperfection shapes, the second corresponding to shells with -mode 1 and -mode 2 axisymmetric imperfection shapes, the third corresponding to shells with +mode 3 and +mode 4 axisymmetric imperfection shapes and the fourth corresponding to shells with -mode 3 and -mode 4 axisymmetric imperfection shapes.

2. For definitions of IDESIGN, IMOVE, and RATIO see the file URPROMPT.DAT, which is listed in Table a24 of the appendix.
