

Table a45 Input data, **soccerball.bin**, for continuing to load the shell with Load Set A: the uniform external pressure. This run immediately follows the STAGS run for which the soccerball.bin file is listed in Table a44 (initial pressure load). Note that NSTRAT = -1, NPATH = 0, and NSOL = 0 (Riks continuous solution). The purpose of this "re-start" run is to determine the collapse pressure of the shell with the residual "**cos(theta)**" dent in it.
